技术特点 Technical Advantages

- 高压带电部分全部密封在不锈钢气箱内，用氮气作为相与相间、相对地间、隔离间的绝缘介质，整个开关装置不受外部环境的影响；断路器、负荷开关、接地回路的关合均采取真空灭弧室的方式；由真空断路器单元代替原环网柜中负荷开关+熔断器的组合电器单元方案，能够在故障发生的初期切断故障回路；可设置专用的泄压通道，将高温高压力气体排放到室外；设备运行更安全可靠且终身免维护。
- 结构紧凑体积小、可安装在空间受限的场所。
- 气箱采用3mm的304不锈钢板材料，使用全球领先的德国TRUMPF公司生产的激光切割、激光焊接设备进行加工，气箱能承受气体压力强度高达0.3MPa，确保在内部燃弧时人身及其它设备的安全；气密性好且外表美观。
- 采用德国SEILER公司全自动氦气检漏及充气设备对气箱进行泄漏率的检测及充氮气，保证气箱的泄漏率<0.01%/年，并确保气箱内的氮气纯度达到99.99%，从而确保产品正常使用寿命达到40年。
- 模块化设计、有多种单元格式方案，可根据不同的需要实现单气箱单元的组合或共箱式单元组合；有侧扩展和顶部扩展方式单独使用或两方式混合使用。扩展母线全封闭，表面涂导电漆接地，安全可靠。
- 机械联锁和电气联锁共同使用，避免误操作引起的故障。
- 真空断路器及真空负荷开关的机械寿命均达到10000次，三工位（隔离、接地）开关的机械寿命达到3000次；采用接地开关+真空断路器组合的方法关合接地短路电流次数不受2次的限制。
- 先进的温升与密度监控装置、电流电压监测系统，自动化解决方案，能实现变电站的无人值守和五遥。
- 洁净厂房、全自动装配流水线及出厂检、试设备，保护产品的一致性及质量。
- HV parts are fully sealed in the stainless steel gas tank, with N2 as the insulating medium of phase-to-phase, phase-to-earth and isolating room. All the switch equipment will not be affected by the external environment; circuit breaker, load switch and earthing loop all adopts the vacuum arc-extinguishing; the vacuum circuit breaker unit replaces the original combined electrical apparatus of load switch and fuse, which can cut breakdown loop at the original time; it also has the specialized pressure relief channel to relief the gas to outside in the high temperature and high pressure; the operation is safe and reliable, free of maintenance.
- Compact structure and small dimension, which means it can be installed in the limited space.
- The gas tank adopts 3mm 304 stainless steel. We use the advanced laser cutting and welding machine imported from TRUMPH Co., Ltd, Germany. The gas tank can bear 0.3 Mpa gas pressure, so as to ensure the personal and other equipment' safety under the condition of internal arching; good air tightness and beautiful appearance.
- Adopt the full-automatic helium leakage check and gas charging equipment imported from SEILER, Germany to charge N2 and check the leakage for the gas tank, so as to ensure the leakage rate is less than 0.01%/year. And the N2 purity can reach 99.99%, the lifetime under the normal use is 40 years.
- Block design and multi units' design scheme, which means it can achieve single gas tank combination or common gas tank combination in accordance with different requirements.
- We can offer different connect methods - side connect, top connect or both. The extended busbar is totally enclosed, the conducting paint is connected to the earth, safe and reliable.
- Mechanical interlocking and electric interlocking ensures to avoid the fault caused by the misoperation.
- The mechanical life of vacuum circuit breaker and vacuum load switch can reach 10000 times, and 3000 times for the three-position switch; the adoption of earthing switch and vacuum circuit breaker makes the making earth short-circuit current exceed 2 times.
- Advanced temperature rise and density monitoring device, current and voltage monitoring system, automation solution can achieve unattended operation for the substation.
- Clean workshop, fully automatic assembly line and advanced factory inspection equipment can ensure products' consistency and good quality.

短路及接地故障指示器 Combined Short-circuit and earthing fault Indicator

短路及接地故障指示器是用来检测短路及接地故障的设备，这种指示器在单回路中压电网中工作，接地故障最小值是10A，这种指示器应安装在电网的每一个分支上。能检测电网发生故障的区段和故障类型，维修人员可以根据此指示器的报警信号迅速找到故障区段，分断隔离故障区段，从而及时恢复无故障区段的供电。

电子式光纤短路及接地故障指示器具有如下优点：

- 传感器和读数仪表之间的所有连接全部经由光纤，传感器可以直接安装在非屏蔽电缆区域
- 电流的调节，复位时间的调节以及电池的更换都可以不必打开盒子直接操作
- 长效自供电无需外部电源
- 可以提供外部报警信号接点

The short-circuit and earthing fault indicator is a combination unit for detecting short circuit faults and earthing faults. This indicator operates in middle voltage radial networks with one input. The earthing fault current in resistance earthed or fixed earthed networks must be 10A as a minimum. This indication system should be installed in each branch of the network. It is able to rapidly indicate the right position where the fault occurs so that the service personnel could quickly find the fault segment according to the warning indication signal, separate the circuit from the fault segment for repair, and timely resume the power supply of the normal segments.

The electronic optical short circuit and earthing fault indicator has the following advantages:

- All the connections between the sensors and the reading instrument are done via light mains. The sensors can be mounted directly in the unscreened area of the cable
- The adjustment of the currents, reset time and the battery exchange can be carried out without opening the housing
- Self-powered system without external power supply
- External warning signal independent contacts

电压互感器 Voltage transformer

- 负荷开关单元和组合电器单元标准配置为手动操作机构，也可以选择安装电动操作机构。断路器单元已标配电动储能操作机构，其中分合闸脱扣器，储能电机的额定电压根据项目需要选择。
- 断路器单元隔离开关和所有接地开关只能手动操作。电机操作和合闸线圈电压范围 +10%/-15%，分闸线圈工作范围 +20%/-35%。
- 电动操作机构很容易分期实现。

- Closing and opening operations of load-break switches and charging of the springs of the mechanisms for the circuit-breaker and the switchfuse combination may be performed with a motor operation.
- Disconnector in the V-module and all earthing switches do not have this possibility. Test voltage is + 10/ - 15 % for motor operations and closing coils , and + 20/ - 35% for trip coils and opening coils.
- The motorized operation can easily be mounted to the mechanisms after delivery.
